

THE ULTIMATE POWER SOURCE™

**CAR HIFI · TUNING · 4X4 ·
MARINE APPLICATIONS**

OPTIMA[®] YELLOWTOP[®]

DEEP CYCLE BATTERY FOR EXTREME APPLICATIONS

**LOW INTERNAL RESISTANCE
ALLOWS FOR BETTER SOUND QUALITY**

**NO GASSING OR UNPLEASANT SMELLS,
100% SPILL-PROOF**

OPTIMA YELLOWTOP batteries are made for the extremes. Whether your vehicle is designed to crank out the decibels or take the abuse of off-road driving, you need more from your battery. OPTIMA batteries with patented SPIRALCELL TECHNOLOGY[®] deliver deep cycle characteristics coupled with an extreme resistance to vibration. This combination provides performance vehicles with the repetitive power they need in a spill-proof package. If your vehicle has a lot of accessories like high performance stereo/AV systems, extra lights, winches or hydraulics it demands more from its battery. OPTIMA YELLOWTOP batteries provide the extra performance and cycling capability that your vehicle demands.

OPTIMA® REDTOP®

A STARTING BATTERY WITH PERFORMANCE POWER

**100% SPILL-PROOF AND
MAINTENANCE FREE**

**PERFORMS WELL UNDER
EXTREME TEMPERATURES**

The looks alone generate plenty of excitement. Made for tuner, truck, SUV, and 4 x 4 vehicles: OPTIMA batteries can withstand the high under-hood temperatures in vehicles with performance engines.

The sealed cells make the battery spill-proof, even if you install it on its side! There's no chance of potential damage from battery acid. In addition, the patented SPIRALCELL TECHNOLOGY® in OPTIMA batteries immobilizes the internal components of the battery, enabling OPTIMA batteries to withstand incredible amounts of vibration.

OPTIMA® BLUETOP®

**STARTING AND DEEP CYCLE BATTERY
FOR MARINE APPLICATIONS**

**OVER 15 TIMES MORE
VIBRATION RESISTANCE**

**UP TO 3 TIMES
QUICKER RECHARGING**

An OPTIMA BLUETOP battery will let you stay on the water longer. Whether it's yachting, sailing, or cruising the sea in your motorboat – the OPTIMA BLUETOP battery will always be your true and reliable companion. Its patented SPIRALCELL TECHNOLOGY® means more running time, shorter recharge time and twice the life of traditional marine batteries. Plus, it's spill-proof, can be stored longer and has 15 times the vibration resistance, not to mention superior heat resistance. Look for its colored top and SIX PACK™ shape at your local battery dealer.

THE SPIRALCELL TECHNOLOGY®

MORE STARTING POWER

OPTIMA® batteries deliver a higher level of power to the starter in the critical first 10 seconds of the vehicle starting cycle.

- OPTIMA® REDTOP®
- OPTIMA® YELLOWTOP®
- Traditional battery

REPETITIVE RESERVE CAPACITY

OPTIMA batteries have the ability to withstand significantly more discharge/recharge cycles and still accept a high percentage of the original full capacity.

- OPTIMA® YELLOWTOP® 75 Ah/C20
- Traditional battery 98 Ah/C20

SHAKE IT UP!

Damage from vibration is a leading cause of battery failure. OPTIMA batteries have over 15 times more vibration resistance than traditional batteries due to patented SPIRALCELL TECHNOLOGY.

LONG SHELF LIFE

OPTIMA batteries are ideal for vehicles that are used seasonally because of their low self-discharge rate. All batteries that sit unused for extended periods of time will begin to lose charge. But OPTIMA batteries retain a significantly greater amount of power, enough to start large vehicles like tractors, harvesters, and recreational vehicles even after a long winter of no use.

CHARGING INFORMATION

ALTERNATOR 13.8 to 15.0 volts

BATTERY CHARGER (Constant Voltage)

13.8 to 15.0 volts, 10 amps, 12 - 15 hours approximate

FLOAT CHARGE 13.2 to 13.8 volts, 1 amp maximum current

RAPID RECHARGE (Constant Voltage Charger)

Maximum voltage 15.6 volts. No current limit as long as temperature remains below 50 °C. Charge until current drops below 1 amp.

RECHARGE TIME (Example assuming 100% discharge – 10.5 volts)

AMPERAGE	APROX. TIME TO 90 % CHARGE	
	4,2	5,5
100 amps	35 minutes	52 minutes
50 amps	75 minutes	112 minutes
25 amps	140 minutes	210 minutes

Recharge time will vary according to temperature and charger characteristics. When using Constant Voltage chargers, current will taper down as the battery becomes recharged. When current drops below 1 amp, the battery will be close to a full state of charge.

CYCLIC APPLICATION OR STRING SERIES APPLICATIONS Constant Voltage with Constant Current finish (CC/CV): 14.7 volts, temperature < 50 °C, no current limits. When current falls below 1 amp, finish with 3 amps constant current for 1 hour for type 5,5 and 2 amps for all other types.

(All charge recommendations assume an average room temperature of 25 °C.)
