

Supplier Risk Statement

Clarios relies on the strength of our supplier partners to share emergent, potential, and realized risks to develop collaborative mitigation plans to avoid production disruption, cost increases, security threats, or quality spills.

We expect cooperation and transparency as we assess the risk landscape together, identify threats and diminish the potential impact in areas including:

- Compliance
- Cybersecurity
- Financial
- Geopolitical
- Logistics
- Manufacturing
- Environmental
- Quality
- Supply Assurance

As suppliers identify and manage emergent or real threats that may impact their business, leading to a potential or known disruption of any service, support, or product to Clarios, the Clarios teams should be notified immediately.

Cybersecurity issues should be called into the Clarios buyer or relationship owner followed by an email.
